

Deployment Service: Container Essentials

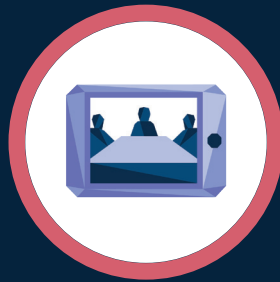

Application modernisation is key to gaining the most value from the cloud technologies available to you. But how do you do this if your development teams do not have the Azure infrastructure skills or resource to create and deploy the Azure environment your application needs but still want to manage the application?

The container essentials deployment provides all that you need to work from a secure base layer Azure infrastructure to containerise your application, developed and deployed by an Azure Expert MSP.

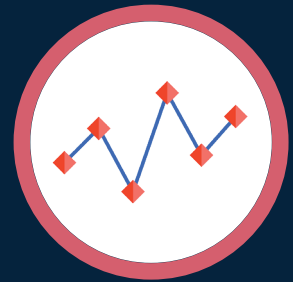

Built by Experts

The build is delivered as part of our Application Modernisation solution path and is run by experts not only Azure but in application development cycles with knowledge of key elements to ensure the deployment covers all performance and security elements

Full validation & documentation

The build will start with a scoping session to map out objectives and testing scenarios to ensure that all considerations and required learning points are met prior to any production deployment of your application

Microsoft resource access

As an Azure Expert MSP Cloud Direct has a close working relationship with Microsoft providing access to resources for our customers. For this service we will look to gain additional resources from Microsoft to aid you with additional expertise.

Why Cloud Direct?

-  Microsoft Azure Expert MSP partner (audited annually by Microsoft)
-  CAF and Co-Sell ready Microsoft Partner
-  Cloud first MSP - specialists in cloud solutions
