

Azure Scale-up

How to prepare for a safe take-off in Azure

If you're looking to grow and improve the resilience of your Azure environment, then you've come to the right place. Whether your new to Azure but eager to create a stable scalable environment or you're already in Azure but don't have the in-house capability or time to grow, you need Azure Scale-up.

What is the Azure Scale-up Package?

Essentially, it's the design and deployment of Azure landing zones following an in-depth assessment of your current IT infrastructure. At the end of the engagement you will be able to optimise your estate in Azure and have the necessary security plans in place to scale-up.

What outcomes can I expect?

A detailed summary of the landing zone deployment as well as an enhanced governance and a secure Azure environment on which to invest and scale up.

What's the process?

Stage 1 - Discovery	Introductory consultation with Azure Consultant to introduce the Azure landing zone, review existing environment and agree a deployment strategy.
Stage 2 - Deployment	The landing zone is deployed in Azure and documented. We will define the standards and policies based on your technical requirements.
Stage 3 - Knowledge transfer	We share and run through a detailed breakdown of the Azure landing zone deployment as part of our Knowledge Transfer process.

What are Azure landing zones?

Azure landing zones are the fundamental structure which put security and optimal performance at the core of your cloud environment. They can be implemented from the beginning or integrated into an existing configuration to support your workloads and provide additional security. Azure landing zones are part of the cloud adoption framework and futureproof the Azure environment for growth.
